

**FCS MS2- Musculoskeletal, Part 2**

**Prerequisite: FCS MS1**

MS2 explores advanced concepts in musculoskeletal treatment focused on dysfunctional bone or osseous dysfunction. FCS is capable of correcting /reducing osseous deformities including kyphosis, scoliosis, tibial varum/valgum and leg length discrepancy. Osseous or Periosteal dysfunction is the primary pathophysiology behind tendonitis in all regions of the body and is also the primary residual dysfunction seen in virtually all fracture and bone contusion cases. When combined with neural FCS techniques, it can quickly resolve intractable conditions such as tarsal tunnel syndrome and idiopathic peripheral neuropathy. The skills gained in MS2 will give therapists skills enabling them to easily correct conditions in both chronic and acute cases that are virtually impossible to treat with any other form of medical intervention or manipulation.

**Outline:**

- *Physiological basis of MS Counterstrain*
- *Anatomy & Physiology of cartilage*
- *Anatomy and physiology of bone*
- *Gain proficiency in the MS2 cranial scan*
- *Gain proficiency in the treatment of osseous and cartilage dysfunction in all areas of the body*

**Goals/Objectives:**

- *Improve your understanding of MS anatomy as it relates to chronic pain syndromes*
- *Learn to recognize the signs and symptoms of MS cartilage/ bone dysfunction in the body*
- *Learn to properly diagnose and correct MS dysfunction in the spine and extremities*

**Course Schedule:**

Day One:	Day Two:	Day Three:
8:00 - 8:30 Registration	8:00 - 9:00 Sacral, Pelvic and Coccygeal Lab	8:00 - 9:30 Periosteal Dysfunctions of the Foot, Lab 2
8:30 - 10:15 Opening Lecture	9:00 - 11:00 Pelvic and Thigh Dysfunctions	
10:15 - 12:00 MS2 /MS1 Cranial Scans	11:00 - 12:30 Thigh and Knee Dysfunctions	9:30 - 11:15 Scapular and Humeral Periosteal Dysfunction
12:00 - 1:00 Lunch	12:30 - 1:30 Lunch	11:15 - 11:30 Break
1:00 - 2:45 Extended spinal Segments and External Rib Torsions	1:30 - 3:00 Ankle / Leg Periosteal Dysfunctions	11:30 - 1:00 Periosteal Dysfunctions of the Forearm
2:45 - 4:30 Flexed spinal Segments and Internal Rib Torsions	3:00 - 3:15 Break	
4:30 - 5:00 Sacral, Pelvic, Coccygeal Demo	3:15 - 5:00 Periosteal Dysfunctions of the Foot, Lab 1	1:00 - 3:00 Wrist and Hand Periosteal Dysfunction/ Wind Down
