

SCS I for the Spine

SCS I focuses on spinal dysfunction. Lecture and extensive lab time are spent on the cervical spine, thoracic spine, lumbar spine, ribs, pelvis and sacrum. Emphasis is placed on developing palpatory and hands-on treatment skills to enhance the students' effectiveness with the techniques. Upon completion of the course participants will be able to perform Strain Counterstrain treatment techniques for common joint dysfunction, understand the neuromuscular basis for Strain Counterstrain, know how to perform a full body evaluation and have learned the Strain Counterstrain documentation format. More than 85 techniques are taught throughout the course and each participant receives a syllabus outlining each technique demonstrated.

Prerequisite: None
